BASICLINE design

A close-up photograph of the bottom of a silver metal pole. The pole is cylindrical and has a black, rectangular base attached to its end. The base has a textured, ribbed surface on its bottom face and a small circular hole on its side. The pole is set against a plain white background.

A close-up view of the foot pedal and the lower frame of the stepper. The pedal is a rectangular plate with a fine, grid-like texture for grip. It is mounted on a silver-colored metal frame. A black strap with a circular buckle is attached to the side of the frame, likely for securing a water bottle or a small bag. The frame consists of two main legs that meet at a central point below the pedal.

Diagram of a single vertical cable. A black dot is placed on the cable, and a horizontal double-headed arrow below it is labeled "5,5 cm", indicating the distance from the top of the cable to the dot.
